

TIS Assignment: PC Assemble (PC maintenance)

Description:

This PC maintenance is my PC Assemble Laboratory Assignment for the Subject Technology and Information System (SECP1513). This activity focused on learning the hardware component of a computer and learn how to disassemble and assemble a desktop computer.

What I Learn:

Through this PC maintenance, I get to learn about the component's names and functions such as Power Supply, RAM, CPU fan, Hard Disk, CPU and Cables. I also get to learn how the component connects to each other to make a computer run and works

Reflection:

The PC Assemble Session has provide a chance for me to experience how to identify and assemble a computer hardware component. It has enhanced my understanding to each component by their name and functions and how the connect to each other to make the computer successfully run. This activity has improved my knowledge and skill.
